SPLASH TIGHT SUIT SPC 4400/4800/4900

SPC 4400/4800/4900 – Liquid-tight splash suits

The Dräger SPC 4400, SPC 4800 and SPC 4900 protective suits are designed to provide reliable protection against liquid and solid chemicals. These suits are ideal for a wide range of applications, such as decontamination, maintenance, inspection, cleaning, decanting and refilling, as well as handling liquid chemicals and fine particles.

Here is an overview of the key features of each model:

- Dräger SPC 4400 with hood:
  - Elasticated front opening, hood and cuffs and leg cuffs.
  - Can be used individually or in combination with respiratory protection products, gloves and boots.

- Dräger SPC 4800 with elastic facepiece:
  - Designed for use with a full-face mask
  - Includes integrated gloves and socks
  - Soft, flexible and exceptionally easy to don.

- Dräger SPC 4900 Full Face with Visor:
  - Worn with a compressed air breathing apparatus inside
  - Pre-configured with integrated gloves and socks.

All three suits are CE certified and classified as Type 3, 4, 5 and 6 chemical protection suits. Made from coated CFL and CPM material, they offer complete protection against particles, dust, alkaline solutions and concentrated inorganic acids. They are also highly resistant to a wide range of organic chemicals in liquid form.

Whether you are involved in industrial operations or emergencies, these suits provide adequate protection for any application.
