

HYTRANS HOSERAMP

The Hytrans Super Large Diameter Hose Ramp (SLDHR) is specifically designed to protect hoses while allowing traffic to pass smoothly, ensuring uninterrupted operations.

Accommodates multiple hose lines

The SLDHR can accommodate up to four hose lines and is available in three sizes, supporting hose diameters of 8" (200 mm), 10" (250 mm), and 12" (300 mm).

Lightweight and strong

Constructed entirely from durable aluminum, the SLDHR is lightweight yet robust enough to support everything from small vehicles to large passenger buses. Its stable design allows for minor steering adjustments when crossing, ensuring both safety and flexibility.

HoseRampBox

For easy transport and rapid deployment, the SLDHR can be securely stored in the Hytrans HoseRampBox (HRB). This mini container is designed for a seamless fit on the DuoContainer, CombiContainer, or directly on your vehicle. The HRB ensures convenient storage and quick access during emergencies.
