

SHORT TERM BREATHING APPARATUS PAS® COLT

Dräger PAS® Colt: robust and reliable

This emergency escape and short-duration operation system is a valuable ally for those working in potentially hazardous environments.

Key features:

- Ergonomic harness: The Dräger PAS Colt is positioned around the waist with a typical shape-retaining harness, allowing the user to don it quickly and easily. Even for those without experience, the procedure is immediately obvious.
- Modular release design: The optional "release" function allows the cylinder to be separated from the waistband. This makes the Dräger PAS Colt ideal for confined spaces.
- Machine washable: Its harness is machine washable and easy to maintain.

This respirator is lightweight, flexible and easy to use. It is approved for use in applications requiring short-duration use units. In addition, Dräger PAS filters ensure clean air, retaining liquid and solid particles, oil vapors and odors.
