

FIRE PUMP WATERAX BB-4-23VX

The BB-4® is a high-pressure centrifugal pump that has been used by forestry agencies to fight wildland fires for over 40 years. It has been the weapon of choice in many wildland cleanup operations and is especially well-suited for Type 6 fire trucks. Available in portable and vehicle-mounted configurations, the BB-4® pump generates the high pressure needed to overcome the challenges of difficult terrain. A unique feature of the BB-4® pump is the quick-disconnect pump head that is interchangeable with the MARK-3®. This significantly reduces spare parts inventory and allows for quick changeovers in the field.

- Engine brand: Briggs & Stratton Vanguard
- Engine type: Gas 4-Stroke
- Maximum pressure: 440 PSI (30.3 bar)
- Free flow: 106 US GPM (401 lpm)
- Maximum head: 1015' (309 m)
- Weight: 154 lbs (70 kg) – 194 (88 kg)
